

This silly putty recipe/experiment is made with just 3 simple ingredients:

Ingredients needed:

- **4 oz bottle of regular school glue**– not the washable kind (our first batch was made with washable glue, but the washable glue didn't work to well, so I recommend using regular, all purpose glue. If you can't find this glitter glue, make your own with a few drops of food coloring and a few tablespoons of colored glitter.)

- **Water** (equivalent to the amount of glue you are using. )
- **1 tsp Borax**
- **4 additional oz. of warm water** (this is used to dissolve the borax)

Mix together a 1 to 1 mixture of glue and water.

Stir the glue and water together until completely mixed.

Dissolve 1 tsp of borax into the 4 oz (1/2 cup) warm water. Pour borax water into the glue mixture and stir

Keep stirring, after a few seconds the glue will begin to “gel” up.

Pick up the glue glob and squish it around for a few moments

It will turn into a pliable, yet firm, silly putty like substance.

It’s so cool!

If you find the “silly putty” is becoming less pliable, put it in the microwave and heat it up for 5 to 15 seconds (depending on the amount of silly putty.) Store in a zip-loc baggie.
